

Staffing the ATM System: The Selection of Air Traffic Controllers

Issues of personnel development in air traffic control (ATC) have become a major topic in aviation recruitment and training. Proper selection and training methods are needed in order to reach a high level of efficiency and reliability in ATC. Pilots were considered the most prominent group in aviation for a long time, but with the development of flight guidance technologies came a second operational occupation in aviation: the air traffic controller (ATCO). This volume provides a state-of-the-art overview of controller selection from an impressive collection of international specialists in research and practice. It will prove a valuable and key insight into the demands of air traffic controller selection through its comprehensive and enlightening examination of the current practice in the USA and Europe for the job-analysis requirements of future air traffic management (ATM) systems.
