

What A Marine Surveyor Needs To Know About Small Craft, Ship And Boatbuilding Terminology

For 70 years Jeffrey Casciani-Wood has been messing about with and on boats and ships as he likes to put it. He has devoted a life time to his profession and craft as well as to the art of marine surveying. Jeffrey began his career back in 1945 when he worked at the London Graving Dock on a pre-apprenticeship training course and has never looked back since. Although now retired and no longer a practising marine surveyor, Jeffrey likes to keep his hand in, attending meetings, training days, events as well as continuing to write about his favourite subject. This unique and remarkable book is the culmination of his 70 years knowledge and experience built up in the boat and shipping industry. In What a Marine Surveyor Needs to Know About Small Craft, Ship and Boatbuilding Terminology, Jeffrey has pulled together a glossary of terms for literally hundreds of words relating to wood and steel boats, timber, fibre reinforced plastic boats, rigid inflatable and ferro-cement boats in what must surely rank as one of the most comprehensive publications of its kind. This book is quite simply an essential resource and guide for marine surveyors, no matter what their level of experience, or where in the world they live and practise.
